# SECURITY PACKS

NETWORK SECURITY | ENDPOINT SECURITY | DATA SECURITY

As protection needs may be multiple and vary according to each individual business, Stormshield has designed a set of security service packs that are as simple as they are attractive while meeting the needs of specific uses.

These packs guarantee the continuous update of protection systems considered essential for the running of your business. In addition, they integrate hardware maintenance, software patches and upgrades, access to technical support 5 days a week through our partner network and the provision of the Stormshield Security Watch area.

### REMOTE OFFICE SECURITY PACK

This pack is specially intended for the protection of small remote offices, directly connected to their central site via a VPN tunnel. It has been adapted to thoroughly manage and filter access over the network.

Security features such as antivirus, antispam and URL filtering are therefore managed by the central site. This pack is only available on SN150 and SN200 products.

### UTM SECURITY PACK

Corporations seeking unified protection from threats conveyed by the web or electronic mail and wishing to closely monitor the online activity of their users would find it advantageous to subscribe to this pack.

They would then benefit from Stormshield Network Security's unique intrusion prevention technology, an advanced antispam engine, an antivirus module to detect malicious programs and 15 website categories for defining an internet access policy.

### PREMIUM UTM SECURITY PACK

This pack focuses on corporations with stringent security requirements, by providing the best technology for countering even the most sophisticated attacks. Kaspersky's antimalware system with emulation technology and URL filtering in cloud mode based on 65 categories (Extended Web Control) will raise your protection to a level that is unrivalled on the market.

The Stormshield Network Security module offers real-time visibility over network or application vulnerabilities that affect workstations and servers on the information system.

### ENTERPRISE SECURITY PACK

Aimed at enterprises that have distinct protection solutions for each security function at their disposal, this pack concentrates the added value of Stormshield Network Security products on Next-Generation Firewall features.

Application databases for the purpose of application control are continuously updated, with priority given to applications requested by our clients. The Stormshield Network Security module offers real-time visibility over network or application vulnerabilities that affect workstations and servers on the information system.

.....

### Hardware exchange

All security packs include hardware maintenance in order to ensure business continuity in the event of a hardware failure. Your appliance will simply be exchanged for a similar replacement product. Two levels of service are available.

### Standard exchange

Your appliance will be exchanged once our customer service center receives the defective appliance.

### Express exchange

Your appliance will be exchanged in advance. As soon as our support centers diagnose a hardware failure, the replacement product will be sent, which you would receive the next working day<sup>1</sup>

.....

### Tailored services

Individual security services may be subscribed in order to complete a pack. You will then be able to upgrade your security solution and adapt it closely to your specific requirements.

These options (advanced Kaspersky antivirus with emulation technology, Extended Web Control URL filtering and Vulnerability Manager) are all based on the best solutions recognized on the market.

.....

<sup>1</sup> Please check with us regarding the eligible countries and cities. Applies to diagnoses made before 1 p.m.

## STORMSHIELD SECURITY WATCH

The results of Stormshield's continuous security watch to improve the protection on our products are published in our client and partner areas.

This area, known as the Stormshield Security Watch, lists all vulnerabilities and attacks that our security teams have analyzed and are currently managed by Stormshield Network Security solutions.

**As such, you obtain a full overview of the level of protection our solution provides.**
