

STORMSHIELD

STORMSHIELD NETWORK VU (Unlimited)

VIRTUAL APPLIANCE FOR ENTERPRISE

VIRTUAL APPLIANCES FOR NETWORK

Key Benefits

- ▶ Proven, EAL4+ certified solution
- ▶ Unrestricted users and IP licence
- ▶ On demand security: no initial costs
- ▶ Compliant with virtualization market leaders
- ▶ Best-in-Class Zero-day Intrusion Prevention
- ▶ Perfectly fits your green IT strategy

Many enterprises adopt virtualization as a means to consolidate their major data centers. It is crucial for them to ensure that new virtual architectures do not suffer any degradation in the level of protection afforded to them.

Enterprises adopt virtualization both to bring consistency to their IT infrastructure and to profit from a technology, which brings about a huge TCO reduction, enhanced system exploitation and manageability, load balancing, server portability and immediate recovery.

Poor security practices though, may nullify the dramatic benefits of virtualization. Its dark side is indeed the possibility to arbitrarily connect virtual hosts to network segments with different trust levels. The fact that traditional IPS/IDS appliances, once shielding the physical network, are useless in a fully virtualized environment is a further aggravating factor.

Enterprises need to maintain the same quality of security for virtual environments hosting their business critical applications and information, as previously granted within physical networks.

VIRTUALIZE SECURELY

By sharing the same hardware platform to host operating systems, CRM and ERP as well as all services once located in the DMZ, all affected by potential application vulnerabilities, virtualization raises new challenges for the protection of business critical information.

To adequately protect such multi-layer architectures, enterprises need a mature virtual security solution, allowing to centrally manage multiple virtual and physical security devices. They also require to support smooth migrations within meshed topologies, network segmentation and optimal protection of the inter-site communication. The Stormshield Virtual Appliance for Enterprise is the solution covering all these expectations.

Located in the system kernel, our patented intrusion prevention engine delivers real-time behavioral and protocol analysis of the data flow. It combines several technologies to proactively protect against thousands of existing and future threats. Deployed in a virtual environment, the Stormshield Virtual Appliance for Enterprise comes with an efficient and intuitive management interface. Per user security policy

ABOUT

Arkoon and Netasq, fully owned subsidiaries of Airbus Defence and Space CyberSecurity, run the Stormshield brand and offer innovative end-to-end security solutions both in France and worldwide to protect networks (Stormshield Network Security), workstations (Stormshield Endpoint Security) and data (Stormshield Data Security).

*requires subscription

configuration and comprehensive network monitoring are natively supported to let the security team in control of their virtual network.

On top of the field-proven EAL 4+ certified solution, our virtual appliance integrates all functionalities you would expect from a complete all-in-one solution (UTM). An enterprise may also benefit from a real-time vulnerability assessment engine*, which drastically reduces the risks for sensitive architectures.

Last but not least, Stormshield's VU (unlimited) contributes to secure mobility by delivering a proactive analysis of the data flow coming through "secure" SSL or IPSec VPN tunnels.

ON DEMAND SECURITY

One of the principles driving virtualization being a massive cutback on infrastructure costs, Stormshield Virtual Appliance for Enterprise is delivered at no initial cost, "on demand".

To benefit from the full range of security features offered by Stormshield's Virtual Appliance for Enterprise, large organizations just need to yearly subscribe for the services, firmware and protection updates. The subscription approach bears several advantages, among which full cost control on a yearly basis and fast return on investment for state-of-the-art protection are just a few.

Stormshield Virtual Appliance for Enterprise delivers future-ready, enterprise-class security, granting to large global organizations true protection against internal and external threats. It safeguards both the performance of their virtual network and the employees' productivity.

TECHNICAL SPECIFICATIONS

	VU
Adresses IP protégées	Illimité
Machines virtuelles protégées	Illimité
Connexions simultanées	3 000 000
Nb max de Vlan	512
Nb max de tunnels VPN IPSec	10 000
Nb de clients VPN SSL simultanés	500

USER BASED FIREWALL

Third-party authentication - LDAP, Active Directory, Radius, NTLM
Transparent authentication - Microsoft SPNEGO - SSL Certificate - SSO Agent

MULTIFUNCTION FIREWALL - UTM

SMTP, POP3, HTTP, FTP proxies
Embedded antivirus, anti-spypware
Reputation-based Antispam (DNS RBL)
Heuristic Antispam analyses
IPSec VPN
SSL VPN
Stormshield Extended Web Control 65 categories (Optional)

IPS - APPLICATION BASED FIREWALL

Real-time policy compliance checker
Policy scheduling
Automatic quarantining in case of attacks

Protection from flooding attacks
Protection from data evasion
Advanced management of fragmentation
Protection from SQL injections
Protection from Cross Site Scripting (XSS)
Trojan horse detection
Protection from session hijacks
Dedicated application analysis (plugins) : IP, TCP, UDP, HTTP, FTP, SIP, RTP/RTCP, H323, DNS, SMTP, POP3, IMAP4, NNTP, SSL, MGCP, Edonkey, SSH, Telnet...

NETWORK SERVICES

DHCP client and server
NTP client
DNS cache proxy

NETWORK - ROUTING - QUALITY OF SERVICE

Transparent, routed, hybrid modes
Address translation (NAT,PAT, split)
Static routing - Policy Based

Routing
Dynamic routing
Bandwidth guarantee/limitation
Priority-based bandwidth management

MANAGEMENT

Role administration
Stormshield Unified Manager
Stormshield Real-Time Monitor
Stormshield Event Reporter
ssh v2

MONITORING - REPORTING

Logging to Syslog servers (max 3)
E-mail alerts
Automatic interactive report generation
SNMP v1, v2, v3 (DES, AES) agent

OPTIONS

Stormshield Vulnerability Manager: Risk management
